TECHNICAL PROJECTS

TechHub | E-Commerce Platform for PC Parts ***September 2026***

- Built a full-stack e-commerce platform from scratch using Next.js, PostgreSQL, and TypeScript that manage the entire user lifecycle.
- Integrated secure payments and Auth0 authentication alongside an admin dashboard for live analytics and inventory control.

InterviewSpark | AI Interview Simulator ***April 2026***

- Developed an AI-driven simulation platform using Groq API for technical, behavioral, and case-study interview preparation.
- Implemented an automated feedback engine providing real-time scoring across 6 core metrics: technical depth, communication, clarity, confidence, relevance, and conciseness.
- Engineered an analytics dashboard to visualize user progress, identify skill gaps, and deliver actionable performance insights.

StartSmart | AI Business Idea Validator ***April 2026***

- Built a full-stack web app that turns a plain-text business idea into a complete feasibility report: viability score, startup costs in PHP, step-by-step timeline, risks with solutions, and a legal requirements checklist.
- Added an AI chatbot tied to each generated report, so users can ask follow-up questions about their own results (costs, risks, next steps) and get answers based on that analysis, with conversation memory across messages.
- Engineered LLM prompts and JSON handling through Next.js API routes (Groq API) to return consistent, structured output, with PDF report export and a TypeScript/Tailwind interface deployed on Vercel.
